
Industrial & Commercial Lighting For Tough Jobs

Rugged Lighting For High Performance On The Job

Industrial & Commercial lighting is our specialty!

Paramount has the fluorescent or HID luminaire for your application. And every unit features high product integrity, plus the advantages of our experience and custom design.

Quality Materials & Construction

Start with heavy gauge zinc-coated or stainless steel for maximum corrosion protection. Then add quality craftsmanship: welding, painting, sealing (on wet location models) and assembly. We're proud that our product is union-made **in the USA**. Every luminaire is UL Listed, and tested with lamps in the factory before shipping.

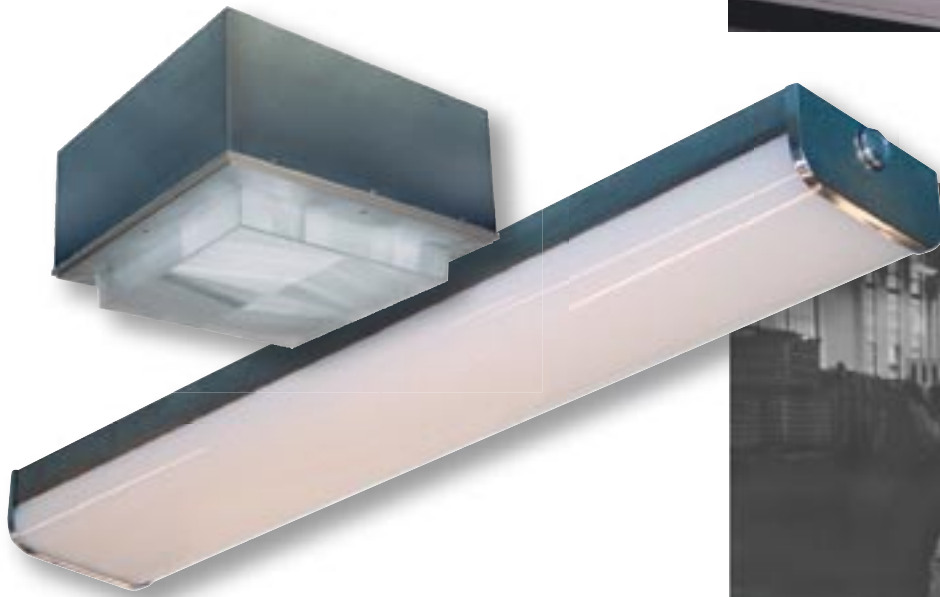

Customer Service

Count on Paramount for the information and service you need, plus on-time delivery and dependability!

Innovation = Design + Technology

Use our custom design abilities to ensure that the lighting you order is right for your project. We continuously incorporate new technologies to add efficiency and value, including interfacing with today's "SmartBuilding" automation. Electronic ballasts were standard in our fluorescent luminaires years before it became a federal guideline.

Experience

Paramount began designing and building industrial luminaires in 1947, with our first Craft Lite® enclosed luminaire. We created some of the first assembly line floor and pit lights for the automotive industry, as shown in this old photo. Later, our T5 fluorescent industrial troffer was one of the first in North America. Our products have changed with the needs of industry, but our commitment to quality is as durable as our product.

Industrial & Commercial Lighting

Applications

Paramount's high performance lighting is designed to excel in your most demanding situations. You'll find our quality industrial & commercial products in:

- Automotive Assembly
- Manufacturing Facilities
- Distribution and Warehousing Facilities
- Schools
- Recreational Facilities
- Correctional Institutions
- Big Box Retail
